MPH in Preventive Oncology

Awarded By James Lind Institute

EduQua Certified Institution

Masters in Preventive Oncology

100% online | Duration: 1.5 - 2 Yrs | Credits: 138 ECTS

Program *Overview*

Preventive Oncology (Cancer Prevention) is an emerging discipline in public health and community oncology that focuses on the scientific and evidence-based preventive measures that can prevent cancer development, screening, and early diagnosis which are key to decreasing the disease burden. Preventive oncology is an interdisciplinary branch of science that aims at preventing cancer by modifying or avoiding the key risk factors using specialized tools and strategies.

★★★★½

"My overall experience with the James Lind Institute (JLI) has been rewarding. I would like to rate JLI 4 out of 5. The course content was well-structured, informative, and relevant to my field, which made learning meaningful and beneficial..."

Khadiija Mohamud Mohamed
MPH- Maternal and Child Health

★★★★½

"I would certainly recommend this program to anyone, especially those in their mid-career and desiring an additional qualification..."

Guya Noel
MPH - Infectious Diseases

★★★★½

"Overall, my experience with James Lind Institute has been positive. I value the kindness and guidance of the lecturers"

Jannie Zibiri
MPH - Health Economics & Policy

Program *Overview*

CREDITS **138 ECTS**

Why Study Cancer Prevention?

Globally, 18,094,716 million cases of cancer were diagnosed in the year 2020. The age-standardized incidence rate for all cancers (excluding non-melanoma skin cancer) for men and women combined was 190 per 100,000 in 2020.
The rate was comparatively higher for men (206.9 per 100,000) than for women (178.1 per 100,000).With the increasing burden of cancer in almost every country, preventing cancer is a significant public health challenge.
It is estimated that almost 40% of cancer cases could be prevented by tackling risk factors relating to diet, nutrition, lifestyle, occupation, and physical activity. Reducing the cancer burden requires interdisciplinary, concerted, and integrated work across the communities backed with support from local, national, and international healthcare agencies and authorities.
The MPH Preventive Oncology (Cancer Prevention) program provides a thorough understanding of the various aspects of preventing cancer from a public health perspective. It has been designed by people working on the ground in raising cancer awareness and helping communities prevent it and get treated.

What You Will Study

The program is comprised of 138 ECTS credits and can be completed in about 18 months. For a detailed list of courses taught in this program, please refer to the curriculum.
After completion of 42 credits, an interim qualification of Advanced Diploma in Public Health Management is awarded. This part of your studies only includes coursework. This is followed by the completion of additional 72 credits via coursework and 24 credits via dissertation under the guidance of a mentor.
